

1 Answer

Any stackoverflowing bug should do the trick.
Example:

2

```
public class StackOverflow
{
    private string m_MyText;

    public string MyText
    {
        get { return MyText; }
        set { this.m_MyText = value; }
    }
}

class Program
{
    [System.STAThread()]
    static void Main(string[] args)
    {
        var foo = new StackOverflow();
        System.Console.WriteLine(foo.MyText);
    }
}
```
